

Innovative flooring for inspired design

InterfaceFLOR® modular carpet tiles are the natural choice for designers and architects - a practical flooring solution that enables dynamic design in every kind of commercial environment.

InterfaceFLOR® Modular Carpet tiles offer:

Creative freedom

Flexible, modular and designed to inspire, the industry's largest range of colours and patterns makes for innovative, easy-to-update interiors. Mix and match styles and colours and create pattern focal points or the illusion of one-piece flooring.

Flexible design

The modular format of InterfaceFLOR® carpet tiles provides virtually unlimited design flexibility. With modular flooring, you can easily replace select tiles with new patterns or colours to create a fresh new look, and designs can easily be scaled to fit the environment.

Easy maintenance

All our modular carpet is coated with InterfaceFLOR's Protekt® stain resistant coating, providing a barrier against permanent staining that could ruin other carpets. InterfaceFLOR® modular also offers resistance to bleach, harsh cleaning agents, liquid spills and iron damage, and any badly damaged or soiled tiles can be quickly replaced by in-house maintenance staff.

Flooring that's built to last

No frayed edges, stretching, shrinking, curling or bubbling - your floors will look great for the life of the installation. Low profile dense face construction using premium branded solution dyed nylon offers superior stain resistance, colourfastness and long lasting appearance retention. And if your carpet should suffer any damage, in-house staff can easily replace select tiles without recarpeting the entire floor.

Hassle-free installation and storage

Our Renovisions® modular carpet tile installation system can recarpet an entire workplace without disrupting business.

With a unique jacking system and skates, Renovisions® can lift existing furnishings. Work can take place out of hours to minimise downtime, and you can expect to save up to 50% on flooring replacement costs.

Modular carpet is easy to handle and store, taking up a lot less space than traditional broadloom carpets.

Innovative flooring for inspired design

A safer work environment

Intercept®, a patented and registered antimicrobial process inhibits up to 99% of all microbial growth, offering protection for the life of the product.

The soft surface of InterfaceFLOR® carpets can reduce the risk of slips and falls, and the dense construction and structured back allow for proven wheel resistance as well as underfoot comfort.

Our yarns are all continuous filaments which won't break down into breathable particles, resulting in improved air quality. All our carpets meet or exceed VOC (volatile organic compounds) emission criteria of the Green Label + protocol. Our adhesive Intertac® also provides "zero VOCs".

Environmentally responsible flooring

InterfaceFLOR® is the leading innovator in sustainable carpet design. Our Australian made ranges are all certified climate neutral, and offer around 67% waste than conventional carpet – so more of your investment goes on the floor.

We offer end-of-life stewardship through our fully operational recycling program, ReEntry®, which allows us to take back old carpet & turn it back into new carpet components, time and time again.

Visit www.interfacesustainability.com to find out about Mission Zero™ – our promise to eliminate any negative impact our company may have on the environment by the year 2020.

Glueless installation

TacTiles is the next generation in carpet installation, a glue free installation method which reduces our environmental footprint by more than 90% and takes InterfaceFLOR closer to reaching its goal of zero footprint.

Designed to enhance the flexibility and efficiency of InterfaceFLOR modular carpet, TacTiles offer the stability and durability of a permanent installation, without the need for permanent adhesion.

All our products are covered by a comprehensive 15 year warranty covering stability, premature wear, antistatic protection, and manufacturing defects. The antimicrobial effectiveness is warranted for the life of the product.
