

SAVE THE PLANET FROM THE GROUND UP.

The super new thing about new TacTiles from InterfaceFLOR is that they don't use glue. TacTiles have an environmental footprint up to 90% smaller than traditional glues. Designed to enhance the flexibility and efficiency of InterfaceFLOR modular carpet, they offer the stability and durability of a permanent installation, without the need for permanent adhesion.

THERE'S A LOT THAT'S SUPER ABOUT NEW TACTILES.

Affixed to the backing of adjoining InterfaceFLOR carpet tiles, TacTiles bond tiles to each other to create a 'floating floor' – leaving the substrate beneath totally undamaged – enabling greater modular flexibility in wall-to-wall installations as well as moveable, area rug applications.

There is literally nothing in the world quite like TacTiles.

WHAT'S SO SUPER ABOUT NEW TACTILES?

SUPER SUSTAINABLE

TacTiles herald a new generation of sustainable installation systems. Using materials and methods that have waste reduction and environmental impact in mind, InterfaceFLOR has revolutionised the process by eliminating the need for liquid glue.

Perfect for every kind of interior, TacTiles contain no liquid components, eliminating the issue of volatile organic compounds (VOCs), so they can be installed anywhere at any time, even in an occupied space.

Make every floor green with TacTiles.

SUPER STRONG

TacTiles 'weld' modular tiles to each other and not the floor; so even under the duress of heavy traffic there is no shifting or separation. The adhesive used on TacTiles allows for the vertical movement and repositioning during installation, and within a few hours forms a bond with the backing that makes them virtually immovable on a horizontal plane.

You'll always stick with TacTiles.

SUPER FLEXIBLE

Able to be replaced, removed or recycled quickly and simply, new TacTiles are fantastically flexible and easy to install.

Designed to provide design professionals with even more inspiration to create floorscapes that are as beautiful and durable as they are replaceable, TacTiles are as easy to master as they are to manoeuvre. Because their adhesive component is formulated to release on a vertical plane, the tile peels easily away.

When it comes to modular flooring, TacTiles pave the way.

SUPER INGENIOUS

TacTiles enhance the key advantages of modular carpet tiles by giving design professionals the ability to change a floor's design with less disruption, and without damaging the floor beneath.

Strong and highly durable, TacTiles allow installers to simply lift, remove, or replace every tile-creating the world's most sustainable modular carpet installation system ever.

TacTiles put you on the leading edge of floor design.
